

BREAKING THE FREEZE/THAW CYCLE

The Kent Companies building restoration team customizes repair and maintenance plans for each property. We account for historic building components, environmental factors, building appearance and long-term maintenance. We operate our own equipment and field multiple crews, which gives us the capacity to handle projects of any size and scope.

When water drops below 32°F, it expands by 9% and creates cracks throughout your building envelope.

BUILDING PROBLEMS:

- Stair-stepping cracks in brick or block walls
- Delamination of brick or mortar facades
- Deteriorated mortar
- Loose or falling bricks
- Leaking windows

SOLUTION:

Tuckpointing replaces missing or deteriorated mortar joints between brick, block or stones. Replacing the mortar prevents water or trapped moisture from causing long-term deterioration.

RESTORATION SERVICES:

- Tuckpointing
- Block and brick installation
- Stone replacement and restoration
- Brick replacement and repair
- Joint sealants and caulking at masonry and concrete facades
- Restoration of unsound concrete
